

MEDICOSINTERNATIONAL

CASE REPORT- Patient attended the hospital with complain of chest pain,presentation lead the doctors to think it as cardiac pain. Investigations done-ECG/TREAD MILL/CORONARY ANGIOGRAM

Here we are showing the Angiogram (CAG) of that patient

Left coronary artery branches normal no blockage.
Right Coronary artery branches no blockage.

Knowledge & experience of the physician is more important than the diagnostic procedure.

All cardiac examination reports are normal; By the way he is subjected to physicalintervention, Exposure to Radiation, IV inoculation of a die.

Then Patient visited one experienced physician.He examined by checking the tenderness of mediastnum.

Physician diagnosed the pain to be of musculo-skeletal in origin from mediastinum, called Mediastinitis.

Physician advised the patient to stop physical exercises of chest in morning for few days. Now the patient is alright.
